

Start-Tech Academy

Summary

Steps

- **Data Collection**
- **Data Pre-processing**
 - Outlier Treatment
 - Missing value imputation
 - Variable transformation
- **Model training**
 - Test-Train Split
 - Use template to train
 - Do iterations
 - Compare performance of different methods using test set
- **Select the best model**
 - For prediction purposes use model with best accuracy
 - For interpretation purposes look at the coefficient values of parametric models
